Supersite/Checkpoint/Portal – Por quê?

- Manutenção de via permanente em regiões com sistemas de monitoramento
- Facilitar proteção contra atos de vandalismo
- Combinação de dados em uma única passagem de trem possibilita correlações entre dados dos diferentes sistemas
- Otimização de infra-estrutura para implantação dos sistemas (energia, comunicação, via permanente, etc)

Combinação de sistemas de monitoramento

MDS: Modular Diagnostic System
Sistema Modular de Diagnóstico

ABD: Acoustic Bearing Detector
Detector Acustico de Rolamento

HBD: Hot Bearing Detector
Detector de rolamento quente

WILD: Wheel Impact Load
Detection
Detector de carga e impacto em
rodas

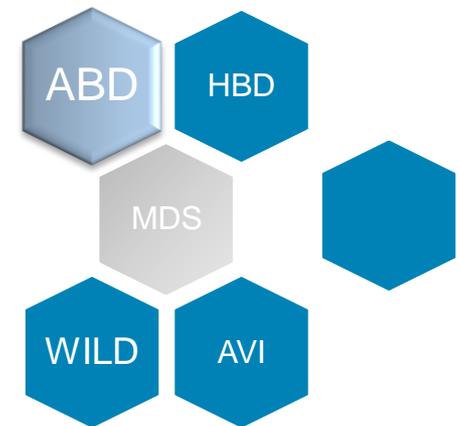

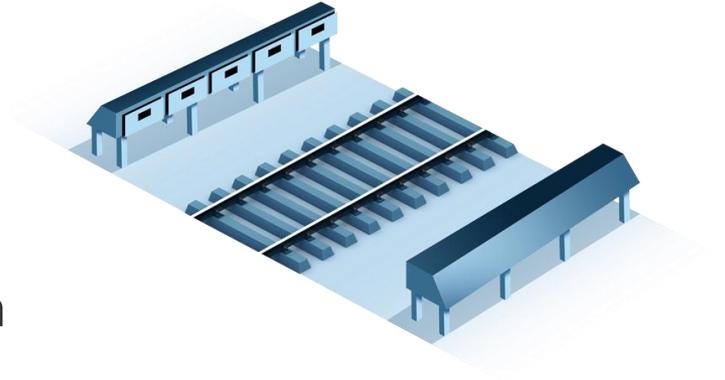

AVI: Automatic Vehicle
Identification
Identificação automática de
veículos (RFID)

Combinação de sistemas de monitoramento

ABD: Acoustic Bearing Detector
Detector Acustico de Rolamento

- ✓ Sistema preditivo de detecção de defeito em rolamento
- ✓ Necessita análise de tendência para performance otimizada (AVI – RFID Tags)
- ✓ Detecção depende da disposição de componentes do material rodante
- ✓ Detecção de defeitos em estágios iniciais

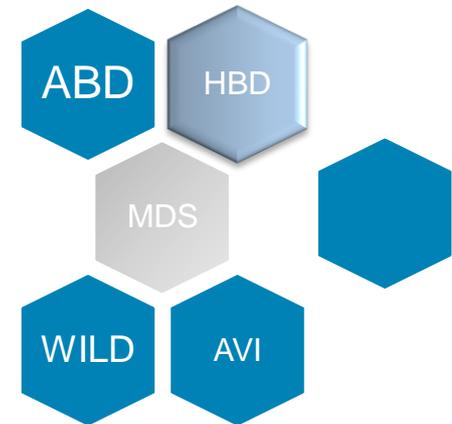

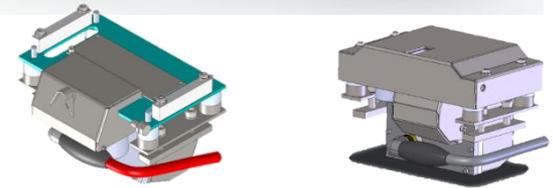

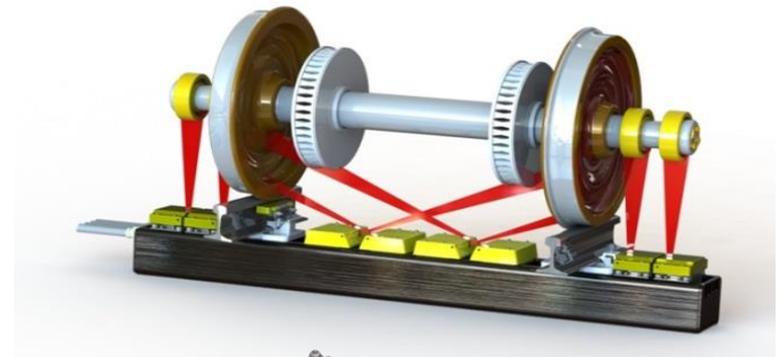

Combinação de sistemas de monitoramento

HBD: Hot Bearing Detector
Detector de rolamento quente

- ✓ Alarme de aquecimento de rolamento e/ou rodas
- ✓ AVI não é pré-requisito essencial
- ✓ Tecnologia multi-canal possibilita medição de vários tipos de rolamento
- ✓ Detecção de defeitos críticos

Combinação de sistemas de monitoramento

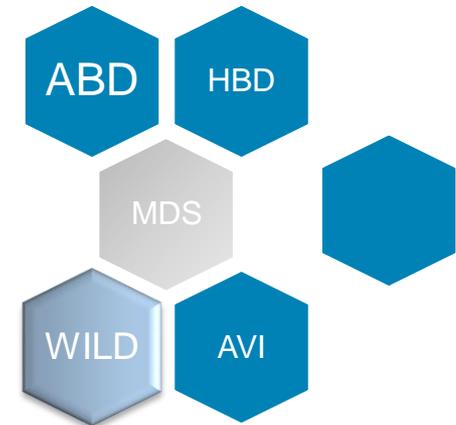

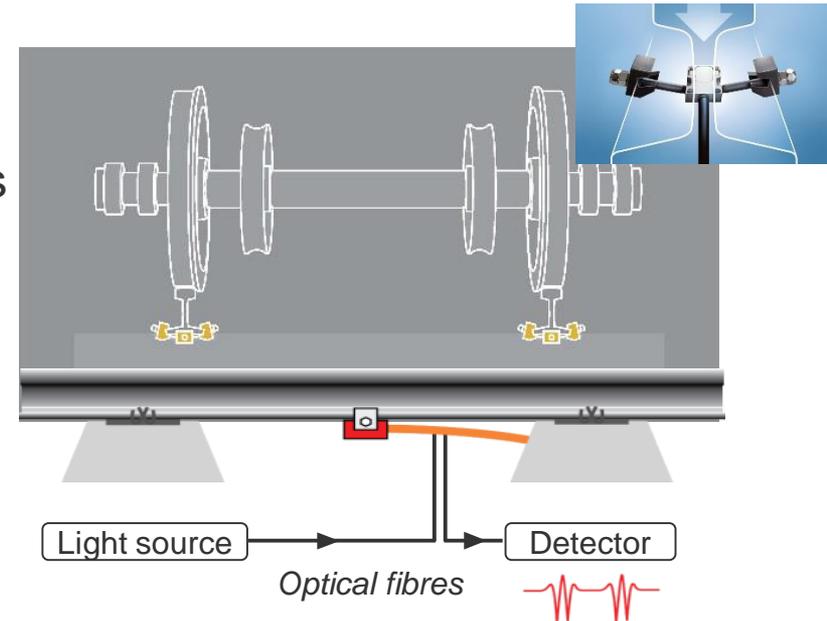

WILD: Wheel Impact Load Detection
Detector de carga e impacto em rodas

✓ Pesagem e detecção de Impacto dinâmico

✓ AVI recomendado

✓ Sensor de fibra óptica imune a interferências Eletro-Magnéticas

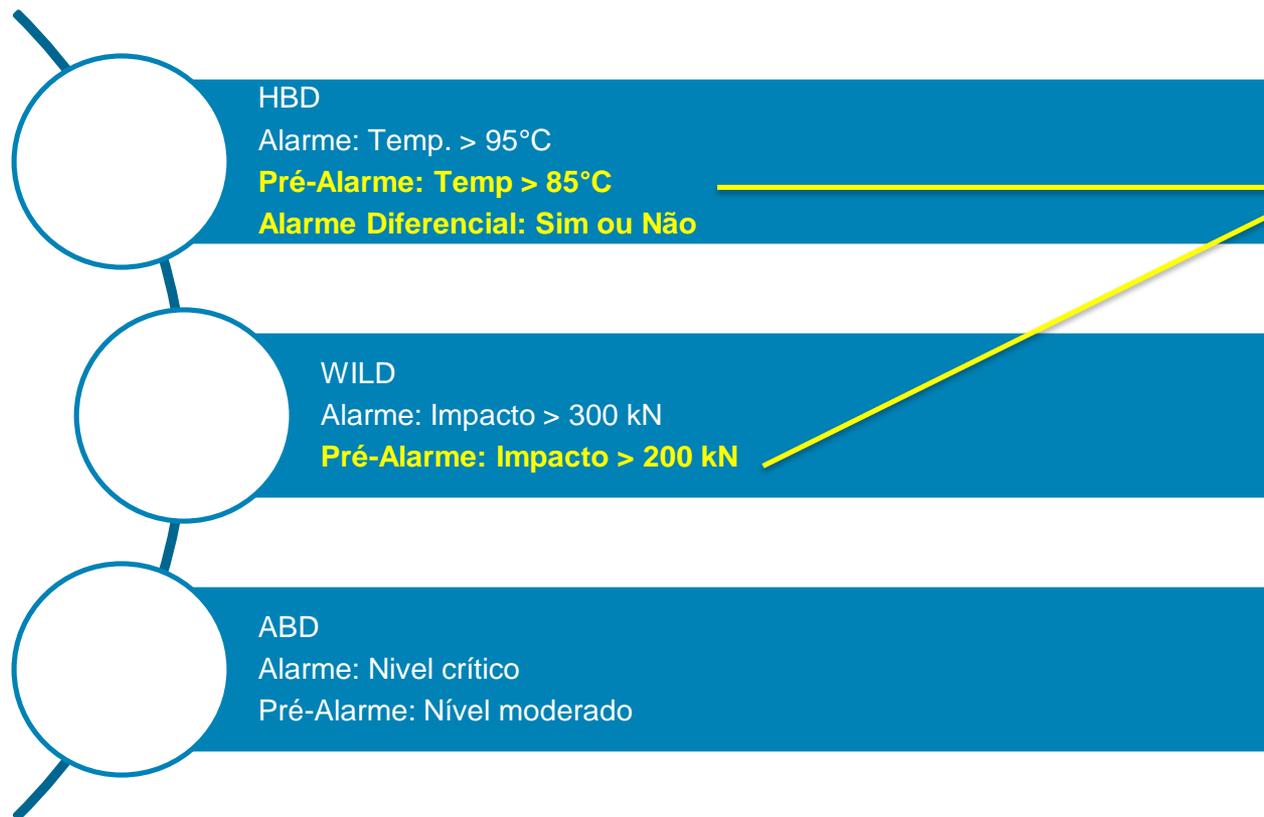

Combinação de alarmes

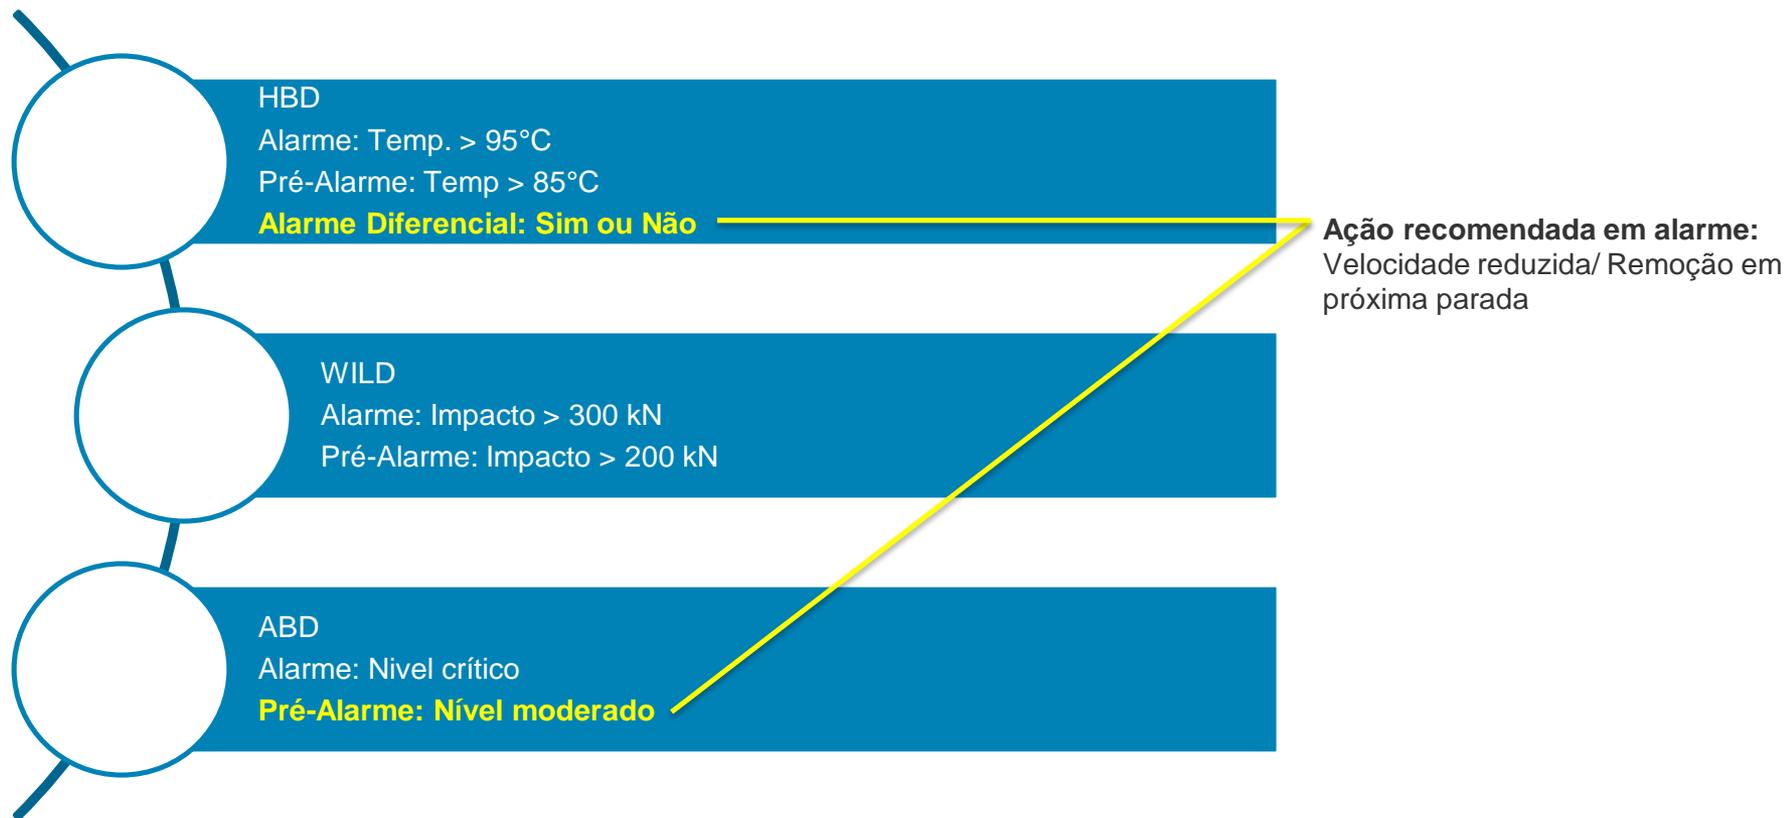

* Condições e parâmetros hipotéticos, para ilustrar as possíveis tratativas.

Combinação de alarmes

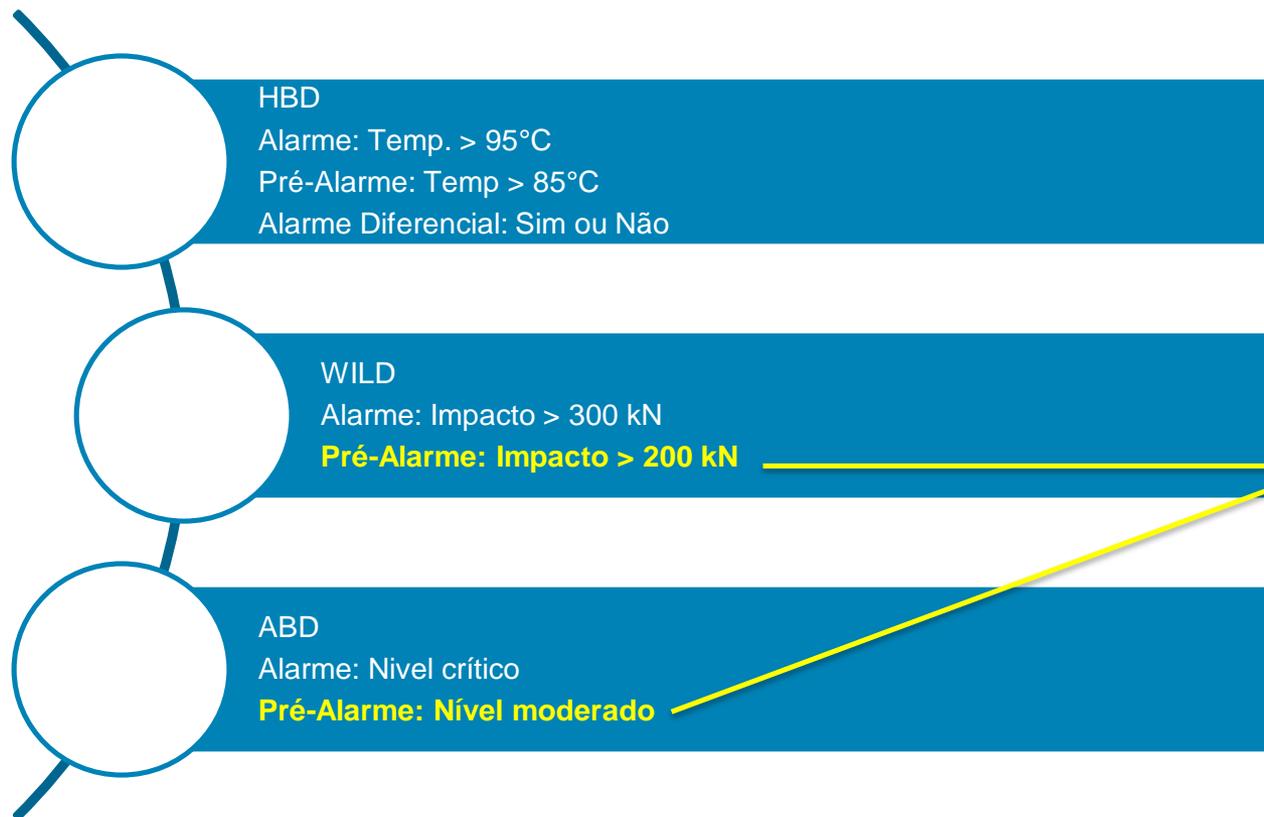

Ação recomendada em alarme:
Velocidade reduzida/ Remoção em próxima parada

Combinação de alarmes

Combinação de alarmes

Ação recomendada em alarme:
Programar manutenção

Conceito de combinação de sistemas PHOENIX^{MDS}

Conclusões

- Utilização de hardware e software modulares reduz numero de sobressalentes e desenvolvimento para intergração de dados
- Concepção modular reduz os custos de implantação
- Combinação e correlação de dados de diferentes sistemas auxilia nas tomadas de decisão e diagnóstico de falhas
- Os sistemas são ferramentas que auxiliam as organizações. A solução vem do expertise do corpo técnico!

Obrigado pela atenção!!
